THE GLOBAL SHAPERS SURVEY

Around the world, there is a high level of acceptance of anthropogenic climate change on the part of people under the age of thirty, [according](#) [4] to the latest Global Shaper Survey, conducted by the World Economic Forum.

Presented with "Science has proven that humans are responsible for climate change," 69.6% of respondents strongly agreed, 21.7% somewhat agreed, 6.7% neither agreed nor disagreed, 1.7% somewhat disagreed, and 0.9% strongly disagreed.

Data was provided for various regions, subregions, and countries for which there were more than three hundred respondents. Among respondents in the United States, 76.3% strongly agreed that science has proven that humans are responsible for climate change, while 16.7% somewhat agreed, 4.3% neither agreed nor disagreed, 1.8% somewhat disagreed, and 1.0% strongly disagreed.

Respondents were also asked to rank serious issues affecting the world today. "Climate change/destruction of nature" was ranked the most serious for the third year in a row, with 48.8% of the vote in 2017.

The Global Shaper Survey was conducted on paper and in person from March 31 to June 30, 2017, reaching 31,495 individuals in 186 countries and territories; the analyses in the report were based on the answers to 24,766 surveys.
